Machinery spare parts for plastics and rubber industry

- ## Our offer

- Fast solutions in the event of shutdowns of the following extruder types: recycling, injection, blow moulding, retreading and also of the food industry factories machinery due to worn out parts such as:
- Modernisation and performance improvement of plastic, rubber and food industries machinery
- Finishes in accordance with your requirements, design exactly to your specific needs

- High quality materials and processing
- Free advice in the field of plastic, rubber and food industries extruders. Proposed solutions of technological and manufacturing problems

•Machine parts

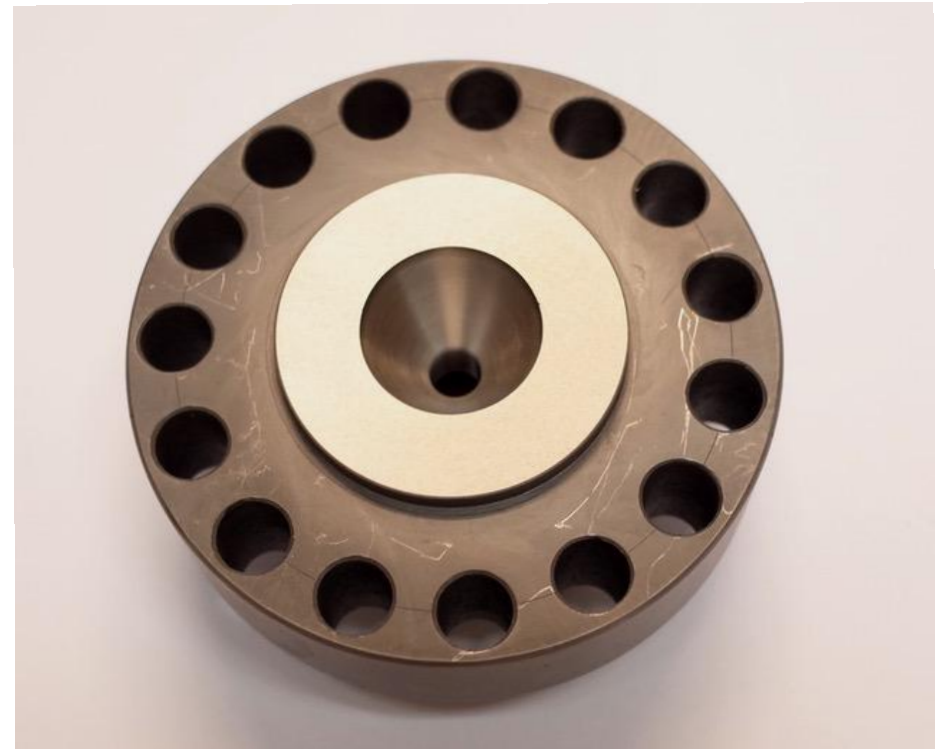

-
- - Screw Element and Segment Barrel
- - Bimetallic Screw and Barrel
- - Screw and Barrel for Rubber Machine
- - Parallel Twin Screw and Barrel
- - Single Screw and Barrel for Extruder
- - Single Screw and Barrel for Injection Molding Machine
- - Conical Twin Screw and Barrel
-

Inverse

- surface finish
 - Nitriding
 - Bimetal
 - Hardening
 -

Injection moulding heads

Strainer

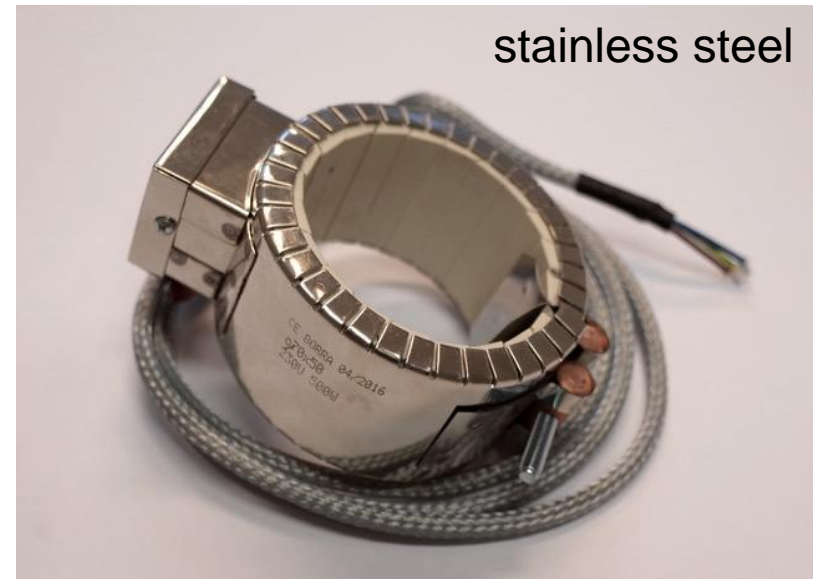

Moulding Nozzles

• Heating strips and devices

- - heating nozzle
- - ceramic heating barrel
- - heatind sensors
- - heating patrons
-

Masterbatch

- Our main customers produce
- -cables and automotive cables
- -products of injection moulding
- -regranulates

Fully electric injection molding machines TOYO made in Japan.

- 30-years tradition in development and manufacturing of fully electric injection molding machines.
- The Si-6 series – the 6th generation representing the top of the development with many proprietary elements.
- The significant savings of operating costs till 50% in comparison with the classic hydraulic machines.

TOYO

-
- The machines are divided in three series according to the clamping force
- from 50 till 1200 t
-
